BLUE Natural Veterinary Diet KS and K+M

Now you can provide natural therapeutic diets for dogs and cats with kidney disease

Chronic Kidney Disease (CKD) affects as many as 10% of geriatric dogs and 35% of geriatric cats.

DOGS

Recommended Levels for Renal Diets 1-3 | NVD KS Kidney Support for Dogs |
--- | --- |
Protein | 14 - 20% |
Phosphorus | 0.2 - 0.5% |
Sodium | < 0.3% |

KS Kidney Support for Dogs + Mobility Support for Cats

Formulated by veterinarians and animal nutritionists to help manage kidney disease, both products feature: 1-3

- Controlled protein levels: Research has shown that reduced protein levels help control the clinical signs of uremia in dogs and cats.
- Controlled levels of phosphorus: Research has shown that decreased dietary phosphorus helps to limit the progression of kidney disease.
- Controlled levels of sodium: Feeding renal diets with decreased sodium has been associated with increased survival time.

Both KS and K+M also feature:

High levels of omega-3 fatty acids, EPA and DHA, which have been shown to be beneficial to animals with kidney disease.

- Research has shown that supplementation with omega-3 fatty acids moderates serum levels of inflammatory mediators in healthy dogs. 4
- Managing inflammation in kidney tissues can provide a renoprotective benefit. 5

Antioxidants to help reduce oxidative stress, an important contributor to the progression of kidney disease.

L-Carnitine to help support healthy muscle maintenance and body condition (for dry formulas only), which is beneficial for dogs and cats with compromised renal function. 6

K+M Kidney + Mobility Support has been clinically shown to promote maintenance of lean muscle mass and renal health in senior cats. 7-9

Additional Features for Cats and Dogs

In addition to providing nutrition for pets with kidney disease, BLUE NVD KS Kidney Support for Dogs and K+M Kidney + Mobility Support for Cats provide more benefits, including: 10-12

- Clinically proven to produce a Calcium Oxalate Relative Supersaturation value of < 3 in both dogs and cats*
- Highly digestible and highly palatable (K+M Kidney Support wet and dry formulas, and K+M Kidney + Mobility Support dry formula)
- Calorically dense to promote adequate energy intake with less volume intake (for dry formulas only)
- Clinically shown to produce ideal stool quality
- Complete and balanced nutrition

Additional Features for Cats

BLUE K+M Kidney + Mobility Support for Cats is formulated to nutritionally manage both kidney disease and joint disease with added glucosamine and chondroitin sulfate to support mobility health.

- Chondroprotectives such as glucosamine and chondroitin sulfate promote healthy cartilage metabolism by providing substrate, upregulating chondrocytes, and inhibiting degradative enzymes.
- A diet containing EPA, DHA, glucosamine and chondroitin sulfate, as well as other joint health promoting nutrients, has been shown to improve mobility in cats with degenerative joint disease.

As many as 1 in 10 dogs and 1 in 5 cats suffer from cardiac disease.

KS and K+M diets feature nutrition that’s been shown to benefit animals with cardiac disease, by providing: 13-16

- Controlled sodium levels, high levels of omega-3 fatty acids (EPA & DHA), plus antioxidants
- L-Carnitine and taurine, shown to support cardiovascular health

CATS

Recommended Levels for Renal Diets 1-3 | K+M Kidney + Mobility Support for Cats |
--- | --- |
Protein | 28 - 35% |
Phosphorus | 0.3 - 0.6% |
Sodium | ≤ 0.4% |

As many as 1 in 10 dogs and 1 in 5 cats suffer from cardiac disease.

KS and K+M diets feature nutrition that’s been shown to benefit animals with cardiac disease, by providing: 13-16

- Controlled sodium levels, high levels of omega-3 fatty acids (EPA & DHA), plus antioxidants
- L-Carnitine and taurine, shown to support cardiovascular health

Blended to preserve a Calcium Oxalate Relative Supersaturation value of < 3 in both dogs and cats

Additional Features for Cats

BLU+K-M Kidney + Mobility Support for Cats provide more benefits, including:

- Complete and balanced nutrition

*For dry formulas only. Wet formulas are indicated for intermittent or supplemental feeding.
